

## How to access the Internet via the Cosy (beside Talk2M VPN)

I have an engineer with his "Service Laptop" on site and connected on the Cosy-LAN.

Is there a way for the engineer to go on Internet (beside the Talk2M-VPN tunnel)?

Yes. This is possible.

But you need to change the security settings of the eWON to allow these connections.

On the COSY, the settings you'll need to change are:

- NatIff = 2 (Nat and TF on WAN)
- VPNRedirect = 0 (Allow traffic outside the VPN tunnel)
- FwrdToWAN = 1 (Forward LAN traffic to WAN)

To change these parameters you can use the advanced configuration section of the Cosy. Check our [KB-081 - Cosy - Editing advanced configuration parameters](#) document if it is the first time you use the advanced configuration section.

The eWON must be rebooted to apply the changes.

This process turns Plug'n Route off. You will need to make sure that all of the Ethernet devices behind the eWON have the eWON's LAN IP address as the default gateway address. If you do not take this step, you will not be able to reach those devices through the Talk2M connection.

The service laptop must also have the eWON's LAN IP address as its gateway address. In addition, the service laptop must have a valid DNS server specified. The DNS server can either be the DNS server you specified when you configured your eWON's WAN settings or can be a public DNS server
